

Laradock installation on ubuntu 19.10

Setup for single project

Requirement

Git

Docker >= 17.12

Steps

Go to Terminal and create a laravel project using composer by

```
punom@punom-Aspire-A315-53G:~$ composer create-project laravel/laravel hillerød
```

then

```
punom@punom-Aspire-A315-53G:~$ cd hillerød
```

then

Clone laradock on your project root directory: by

```
punom@punom-Aspire-A315-53G:~/hillerød$ git submodule add  
https://github.com/Laradock/laradock.git
```

then

Enter the laradock folder and copy `env-example` to `.env` by

```
punom@punom-Aspire-A315-53G:~/hillerød$ cd laradock
```

then

```
punom@punom-Aspire-A315-53G:~/hillerød/laradock$ sudo docker-compose down
```

output

```
[sudo] password for punom:  
Stopping laradock_nginx_1      ... done  
Stopping laradock_php-fpm_1    ... done  
Stopping laradock_phpmyadmin_1 ... done  
Stopping laradock_workspace_1  ... done  
Stopping laradock_docker-in-docker_1 ... done  
Removing laradock_nginx_1      ... done  
Removing laradock_php-fpm_1    ... done  
Removing laradock_phpmyadmin_1 ... done  
Removing laradock_workspace_1  ... done  
Removing laradock_mysql_1      ... done  
Removing laradock_docker-in-docker_1 ... done  
Removing network laradock_frontend  
Removing network laradock_backend  
Removing network laradock_default
```

then

```
punom@punom-Aspire-A315-53G:~/hillerød/laradock$ sudo docker-compose up -d nginx  
mysql phpmyadmin
```

output

```
Creating network "laradock_frontend" with driver "bridge"  
Creating network "laradock_backend" with driver "bridge"  
Creating network "laradock_default" with the default driver  
Creating laradock_docker-in-docker_1 ... done
```

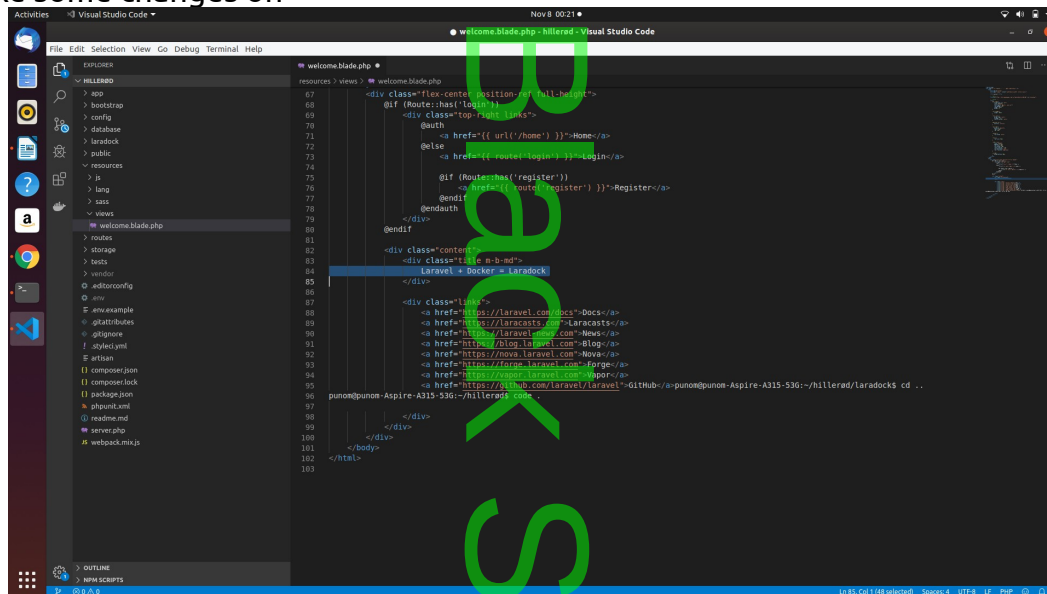

Creating laradock_mysql_1 ... done
Creating laradock_phpmyadmin_1 ... done
Creating laradock_workspace_1 ... done
Creating laradock_php-fpm_1 ... done
Creating laradock_nginx_1 ... done

its done. Hip hip hu.....

How to check?

```
punom@punom-Aspire-A315-53G:~/hillerød/laradock$ cd ..  
punom@punom-Aspire-A315-53G:~/hillerød$ code .
```

Then make some changes on

```
...  
<div class="content">  
  <div class="title m-b-md">  
    Laravel & Docker = Laradock  
  </div>  
  <div class="links">  
    <a href="https://laravel.com/docs">Docs</a>  
    <a href="https://laracasts.com">Laracasts</a>  
    <a href="https://laravel-news.com">News</a>  
    <a href="https://blog.laravel.com">Blog</a>  
    <a href="https://nova.laravel.com">Nova</a>  
    <a href="https://forge.laravel.com">Forge</a>  
    <a href="https://github.com/laravel/laravel">GitHub</a>  
    <a href="https://github.com/punom/punom-Aspire-A315-53G:~/hillerød/laradock$ cd .."  
  </div>  
</div>  
</body>  
</html>  
...  
punom@punom-Aspire-A315-53G:~/hillerød$ code .
```

go to google chrome
type localhost on the address bar
output
